

Most Used String Functions in Python

Case Manipulation

`.lower()` -> `"HELLO".lower()` -> `"hello"`
`.upper()` -> `"hello".upper()` -> `"HELLO"`
`.capitalize()`-> `"python is fun".capitalize()` -> `"Python is fun"`
`.title()` -> `"python is fun".title()` -> `"Python Is Fun"`
`.swapcase()` -> `"HeLLo".swapcase()` -> `"hElLo"`

Search and Check

`.find()` -> `"hello".find("l")` -> 2
`.rfind()` -> `"hello".rfind("l")` -> 3
`.index()` -> `"hello".index("e")` -> 1
`.startswith()`-> `"python".startswith("py")` -> True
`.endswith()` -> `"python".endswith("on")` -> True
`'in'` -> `"th" in "python"` -> True

Strip and Replace

`.strip()` -> `" hello ".strip()` -> `"hello"`
`.lstrip()` -> `" hello".lstrip()` -> `"hello"`
`.rstrip()` -> `"hello ".rstrip()` -> `"hello"`
`.replace()` -> `"hello".replace("l", "x")` -> `"hexxo"`

Content Checks

`.isalpha()` -> `"abc".isalpha()` -> True
`.isdigit()` -> `"123".isdigit()` -> True
`.isalnum()` -> `"abc123".isalnum()` -> True

Most Used String Functions in Python

`.isspace()` -> `" ".isspace()` -> `True`

`.islower()` -> `"hello".islower()` -> `True`

`.isupper()` -> `"HELLO".isupper()` -> `True`

`.istitle()` -> `"Python Is Fun".istitle()` -> `True`

Splitting and Joining

`.split()` -> `"a,b,c".split(",")` -> `['a', 'b', 'c']`

`.rsplit()` -> `"a,b,c".rsplit(",", 1)` -> `['a,b', 'c']`

`.splitlines()` -> `"line1\nline2".splitlines()` -> `['line1', 'line2']`

`.join()` -> `",".join(['a', 'b', 'c'])` -> `"a,b,c"`

Other Useful Methods

`len()` -> `len("hello")` -> `5`

`ord()` -> `ord("A")` -> `65`

`chr()` -> `chr(65)` -> `'A'`

`.format()` -> `"Hello, {}".format("World")` -> `"Hello, World"`

f-string -> `name = "World"; f"Hello, {name}"` -> `"Hello, World"`
